## PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 4+ years of experience designing, developing, and maintaining scalable enterprise applications using C#, ASP.NET Core, .NET Core, REST APIs, Entity Framework, SQL Server, and Background Services. Experienced in backend application development, enterprise monitoring systems, ransomware prevention platforms, secure data replication solutions, and network discovery applications. Skilled in developing high-availability systems, troubleshooting production issues, implementing real-time communication systems, and utilizing AI-assisted development tools to improve productivity. Strong experience in Agile environments delivering reliable enterprise-grade solutions.

---

## TECHNICAL SKILLS

**Programming Languages:** C#, SQL

**Frameworks & Technologies:** ASP.NET Core, .NET Core, .NET Framework, Entity Framework, LINQ, MVC, REST APIs, SignalR, Background Services, Windows Services

**Databases:** SQL Server, MySQL

**Protocols & Cloud:** SSH, SFTP, SMB, Amazon S3, TCP/IP, UDP

**Development Tools:** Visual Studio, VS Code, Git, Jira, Postman, PuTTY, PowerShell, WinSCP, Antigravity

**AI-Assisted Tools:** ChatGPT, OpenAI Codex, Claude AI

**Methodologies & Concepts:** Agile/Scrum, API Integration, Exception Handling, Performance Optimization, Cross-Platform Development, Troubleshooting, System Monitoring, Network Discovery, Real-Time Communication

---

## PROFESSIONAL EXPERIENCE

### Senior Software Engineer

October 2025 – Present

*Perpetuuiti Technosoft Solutions Pvt Ltd | Chennai, Tamil Nadu*

- Lead backend application development and software enhancement activities for enterprise products.
- Design scalable and maintainable applications using C#, ASP.NET Core, REST APIs, and SQL Server.
- Drive improvements in application performance, reliability, and system scalability.
- Participate in architecture discussions, technical planning, and implementation activities.
- Mentor team members and contribute to code reviews and development best practices.
- Work on enterprise resilience, infrastructure monitoring, and security solutions.

### Software Engineer

April 2022 – September 2025

*Perpetuuiti Technosoft Solutions Pvt Ltd | Chennai, Tamil Nadu*

- Developed and maintained enterprise backend applications using C#, ASP.NET Core, and .NET technologies.
- Designed and implemented scalable REST APIs and backend services.
- Built and enhanced Background Services and Windows Services for monitoring and automation workflows.
- Implemented database operations using Entity Framework, LINQ, SQL Server, and MySQL.
- Optimized API performance and database operations to improve response time and system efficiency.
- Enhanced application stability through exception handling, troubleshooting, and logging mechanisms.
- Participated in Agile/Scrum activities including sprint planning, code reviews, deployment, and release management.
- Collaborated with QA and UI teams to ensure successful feature delivery.

---

## PROJECTS

### Continuity Patrol – Enterprise Resilience Management Platform

**Technologies:** C#, ASP.NET Core, Entity Framework, SQL Server, REST APIs, Background Services

Enterprise resiliency and disaster recovery management platform designed to minimize downtime and reduce data loss through monitoring, automation, and recovery capabilities.

- Developed and maintained REST APIs using ASP.NET Core and C#.
- Built monitoring services and automated scheduling workflows.
- Implemented backend modules using Entity Framework and SQL Server.
- Improved application performance and exception handling mechanisms.
- Participated in troubleshooting, issue resolution, and deployment activities.

### **Resilix Rewind – AI-Assisted Ransomware Detection and Recovery Platform**

**Technologies:** C#, ASP.NET Core, REST APIs, SQL Server, Background Services, Claude AI

Enterprise ransomware detection and recovery platform designed to identify malicious behavior patterns and reduce the impact of ransomware attacks through monitoring and recovery mechanisms.

- Developed backend functionalities using C# and ASP.NET Core.
- Primarily worked on Detection and Snapshot modules.
- Implemented behavior-based detection mechanisms to identify suspicious activities and ransomware patterns.
- Designed and developed snapshot creation workflows to maintain secure recovery points.
- Built APIs and backend services supporting monitoring and snapshot operations.
- Utilized AI-assisted development workflows to improve implementation efficiency and productivity.
- Collaborated with development and testing teams to improve reliability and performance.

### **Resilix Replicator – Secure Cross-Platform Data Replication Platform**

**Technologies:** C#, ASP.NET Core, SSH, SFTP, SMB, Amazon S3, SQL Server, Background Services

Secure data replication platform designed to support protected and reliable data synchronization across multiple operating systems and environments.

- Developed backend functionalities for secure replication workflows using C# and ASP.NET Core.
- Supported cross-platform replication: Windows → Windows, Linux → Linux, Windows → Linux, Linux → Windows.
- Integrated SSH and SFTP for secure file transfer and communication.
- Implemented SMB-based file sharing mechanisms.
- Utilized Amazon S3 for secure storage and replication functionality.
- Worked on monitoring and automation services to improve replication reliability.

### **Drift Management – Infrastructure Configuration and Environment Monitoring Platform**

**Technologies:** C#, ASP.NET Core, REST APIs, SQL Server, Background Services, PowerShell

Infrastructure monitoring and configuration management platform designed to continuously compare system configurations between Production and Disaster Recovery (DR) environments.

- Built the initial foundation and core architecture for the Drift Management platform.
- Designed backend structures for monitoring and configuration tracking workflows.
- Implemented APIs and background services for monitoring operations.
- Developed frameworks for comparing Production and DR environment configurations.
- Supported monitoring for: OS Name/Version, CPU Information, RAM and Storage, Memory Utilization, Database Versions, and System Configuration Parameters.
- Designed scalable modules to support future enhancements.

### **ADDM – Application Dependency Discovery Management Platform**

**Technologies:** C#, ASP.NET Core, SignalR, REST APIs, Nmap, NetScan, TCP/IP, UDP, SQL Server, Background Services

Network discovery and dependency mapping platform designed to identify systems and application dependencies across enterprise environments.

- Worked primarily on the Discovery Module for identifying systems and application dependencies.
- Developed backend functionalities using C# and ASP.NET Core for network scanning and discovery operations.
- Implemented discovery workflows: Local Domain Discovery, Subnet Mask Scanning, and IP Range Scanning.
- Integrated Nmap and NetScan for system discovery and dependency analysis.

- Implemented dependency identification using TCP and UDP communication analysis.
- Utilized SignalR to provide real-time IP discovery updates, enabling dynamic display during scanning.
- Built APIs and background services to process discovery data and improve scanning performance.
- Collaborated with development teams to improve discovery accuracy and application performance.

## EDUCATION

---

### Diploma in Computer Science Engineering

2018 – 2020

*Srinivasa Subbaraya Government Polytechnic College, Tamil Nadu | 75%*

**Higher Secondary (12th Standard):** 78%

**SSLC (10th Standard):** 90.2%
